Font design tool: calligrapher

I have designed a font with distinct, easily recognizable characters aimed at improving readability for individuals with dyslexia. Dyslexia often makes it difficult for people to differentiate between similar-looking letters, which can lead to confusion and slower reading. By creating unique, distinguishable forms for each character, the font minimizes letter reversals and mirror-image effects, enhancing clarity. This thoughtful design addresses key challenges faced by dyslexic readers, offering a more accessible and user-friendly reading experience.

Examples:

n and h : I have given a dot on top of n to make it distinguishable

v and u : I have given a dot on top of v to make it distinguishable

b and d : I have given a dot on top of b to make it distinguishable
